

 **TEIKOKU**
CANNED MOTOR PUMPS

**World's Largest Manufacturer
of Canned Motor Pumps**

ISO 9001 CERTIFIED

A MODERN PUMP FOR A NEW MILLENNIUM

Safety Meets Efficiency

The ever-increasing demand for environmental safety at a reasonable cost presents a unique challenge to the Process Industries: find and utilize equipment that, while operating leak-free, performs reliably and efficiently. Teikoku's Canned Motor Pump more than meets the challenge.

Besides double containment for total fluid control, the pump offers some remarkable performance advantages. Designed to enable long periods of time

between maintenance (with pre-planned downtime), it has only a few components that need to be monitored and serviced. It never requires costly alignment procedures or external lubrication. And, because it is sealless, the Teikoku Canned Motor Pump eliminates seal maintenance as well as the demands of complicated seal support systems.

The Teikoku Canned Motor Pump: true secondary containment, reliable operation, cost-efficiency...and continuing environmental concern.

TEIKOKU CANNED MOTOR PUMPS

NO LEAKAGE

Handles toxic, explosive, expensive, hazardous, carcinogenic and corrosive fluids without leaking.

AIRTIGHT

Ideal for vacuum services or for fluids that react to contact with air.

NO SHAFT SEAL

No mechanical seal. No gland packing.

NO EXTERNAL LUBRICATION

Pumped fluid provides cooling and lubrication of motor and bearings. No lubrication levels to check or maintain.

FIELD REPAIRABLE

All wear parts are easily changed.

ANSI SIZES AVAILABLE

ALL PUMPS PERFORMANCE TESTED

Every component of each pump is manufactured by Teikoku, adhering to strict statistical quality control tolerances, and each pump and motor are 100% performance-tested before shipment.

COMPACT DESIGN

Motor and pump are a single unit. No alignment is necessary. No grouting or elaborate foundation is needed.

QUIET OPERATION

Low noise level since no fan is used to cool motor. All rotating parts are within a thick shell container.

EXPLOSION PROOF

Rated to handle conditions up to 5,000 psi.

API 610 NOZZLE LOADS

COMPARE TEIKOKU TO: CENTRIFUGAL PUMPS WITH DOUBLE MECHANICAL SEALS

MECHANICAL SEALS

Can cause total shutdown when they fail. No secondary containment.

SEPARATE MOTOR AND PUMP

Must constantly be kept in proper alignment. Motor is exposed. A foundation is necessary to support the increased weight and reduce the danger of misalignment.

TIME-CONSUMING MAINTENANCE

Motor and bearing lubrication levels must be continually monitored.

ELEVATED NOISE LEVEL

Separate motor cooling fan is required. Rotating parts greatly add to the noise.

MAGNET DRIVE PUMPS

THIN CONTAINMENT SHELL

Subject to damage by magnets and subsequent leakage. No secondary containment.

MANY BEARINGS

All must be checked frequently for proper lubrication. Bearings within impeller shaft cannot be easily monitored.

SEPARATE MOTOR AND PUMP

Must constantly be kept in proper alignment. Motor is exposed. A foundation is necessary to support the increased weight and reduce the danger of misalignment.

NOISY FAN

Needed to cool motor.

TEIKOKU CANNED MOTOR PUMPS

DESIGNED FOR ZERO LEAKAGE SERVICES IN THE CPI

Centered Suction and Discharge for easier piping design and installation, with either ANSI raised face flanges or other standards as requested.

TEIKOKU, the world's largest supplier of canned motor pumps presents a state-of-the-art, sealless pump.

No newcomer to the field, TEIKOKU has provided customers with proven Canned Motor Pumps for 40 years. Over 400,000 units have been installed worldwide, covering every application.

TEIKOKU is unique in that we design and manufacture both pumps and motors, thus insuring our customers total quality control.

The TEIKOKU Canned Motor Pump replaces conventional sealed pumps providing safer, more efficient operation. This is especially advantageous when pumping hazardous or hard to handle materials.

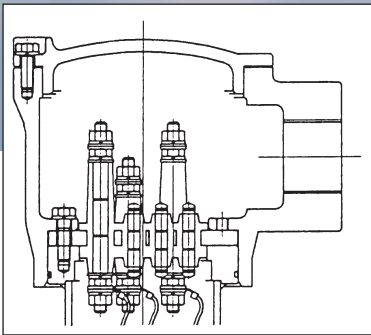

TEIKOKU THRUST BALANCE SYSTEM

Side Gap

Double Orifice

Noncontacting double orifice permits minimum leakage and improves volumetric efficiency. Enclosed impeller with optimum side gap keeps hydraulic losses at a minimum as well.

Improved terminal plates seal off higher pressure from inside, and a waterproof terminal box assures safe outdoor operation. All motor-pumps are provided with an explosion proof terminal box.

Vacuum dried, N₂ purged stator with Class C or F insulation

No coupling alignment is required.
No mechanical seal is required.

TEIKOKU provides expertise and assistance in selecting the pump best suited to our customer's specific needs. We have experience with horizontal standard pumps, vertical designs with either pump top or motor top, pumps and motors jacketed for either cooling or heating, self priming, submerged, slurry design, super-heat resistant pumps and more.

TEIKOKU ROTARY GUARDIAN BEARING WEAR MONITOR

Each Teikoku Canned Motor Pump comes with the patented Teikoku Rotary Guardian (TRG) — an electrical meter that continuously monitors both axial and radial wear. The TRG indicates any serious malfunction of the pump before a failure occurs; many users opt to have the TRG connected to an alarming device.

In Teikoku's factory testing lab, all pumps are 100% performance-tested before shipment.

This photograph demonstrates how the Rotary Guardian continuously provides accurate, incremental metering of unseen axial and radial wear. The computer graphic below the TRG illustrates corresponding changes within the monitored pump (these changes would be concealed within an actual canned motor pump).

Incorrect rotation is indicated by light at lower left.

Incorrect rotor position (axial wear) is indicated. Lights at top show that the rotor is situated too far forward.

Incorrect radial wear is indicated by lights at lower right.

Teikoku's various product lines include zero-leakage canned motor pumps, mixers and accessories. All pumps are available in vertical configuration for longer pump life and minimal space usage in plants and other processing facilities.

PUMP PERFORMANCE CURVE

CORPORATE OVERVIEW

Teikoku USA, Inc. is a wholly owned subsidiary of Teikoku Electric Manufacturing Company, which was founded in 1939 and is now the largest manufacturer of sealless canned motor pumps in the world. Teikoku manufactures over 20,000 units per year.

Typical installation of a Teikoku canned motor pump in a high temperature application.

Teikoku USA's 2,000 square foot warehouse holds, in stock, a large number of pumps and spare parts within the United States for immediate delivery. Parts and service are available 24 hours a day, 7 days a week.

MAIN OFFICE HOUSTON, TEXAS

Located adjacent to our warehouse, our office houses a full staff of technical advisors and service personnel. Texas Process Equipment, Houston, is the authorized service facility for all Teikoku products.

HIGH TEMPERATURE service pumps are available in two versions. Type F with ceramic insulated motor windings (no motor cooling is required) and Type B with cooling jacket on motor with class C insulation.

TYPE F X MOTOR (CERAMIC INSULATION) the simplest construction makes it more reliable

Pump size : 1.5 x 1 x 5 to 4 x 5 x 10
3,600 RPM motor : 2 HP / 1.5 kw to 75 HP / 55 kw
1,800 RPM motor : 5 HP / 3.7 kw to 25 HP / 18.5 kw
 Maximum allowable liquid temperature, 750°F / 400°C. Standard pressure rating up to 430 psi/30 bar.

TYPE B WITH BUILT-IN HEAT EXCHANGER AND MOTOR COOLING JACKET

- **Toughest against temperature changes and all thermal upsets**
- **Wider selection than any other sealless pumps**
- **No mechanical seal, no ball bearings, no coupling – No leakage**
- **Selections can be made from**

Pump size	:	1.5 x 1 x 5	to	8 x 10 x 15
3,600 RPM motor	:	1.5 HP / 1.1 kw	to	233 HP / 175 kw
1,800 RPM motor	:	3 HP / 2.2 kw	to	160 HP / 120 kw

Maximum allowable liquid temperature, 850°F / 455°C regardless of the motor size. Pressure rating up to 5,000 psi/350 bar.

Hot liquid as high as 850°F comes in and out of pump casing, but heat conduction to motor is kept to a minimum by the adaptor neck - Casing and motor are thermally isolated, but hydraulically connected.

There is no substantial exchange between Hot main stream and Cooled circulation stream.

Bearing Monitor (TRG) mounted on terminal box. Sealed terminal plate and true secondary containment.

Heat exchanger keeps the circulating liquid as low as 300°F/150°C while main stream is 850°F/455°C.

ANSI RF flanges are standard. Other standards are also available.

No centerline supported casing is required. No alignment and no leveling are required. Easy installation - less mounting space required.

“Free Floating” single rotating element eliminates problems common with sealed and mag drive pumps.

Back-pull-out design for easier maintenance.

Long lasting and self-lubricating carbon graphite bearings are toughest against heat and thermal impact.

Product is pumped by the auxiliary impeller fixed on the shaft to circulate through bearings and the heat exchanger.

Quality Assurance

All motors and pumps are designed and manufactured by TEIKOKU under its full quality control program. Every motor-pump is inspected and tested before shipment. The QC program consists of the following tests and inspections.

-  **Applied to all pumps, data furnished to customer if required.**
-  **Applied to all pumps, no data available to customer.**
-  **Applied to all pumps, data submitted to customer.**
-  **Test done only upon customer request, data submitted to customer.**

I. MOTOR

1-1	Measurement of resistance between terminals (main power coils).....	
1-2	No load test.....	
1-3	Locked rotor test.....	
1-4	Surge test.....	
1-5	Insulation test.....	
1-6	Dielectric strength test.....	
1-7	Temperature rise test.....	
1-8	Measurement of resistance between terminals (TRG coils).....	

II. PUMP PERFORMANCE

2-1	Capacity vs head, current, input.....	
2-2	NPSH test.....	
2-3	Capacity vs TRG output measurement.....	
2-4	Thrust force and circulation flow measurement.....	
2-5	TRG output check for reverse rotation.....	

III. OTHERS

3-1	Vibration test.....	
3-2	Noise test.....	
3-3	Dimensional check.....	
3-4	Hydrostatic test.....	
3-5	Pneumatic test.....	
3-6	Vacuum test.....	
3-7	Halogen leak test.....	
3-8	Mechanical seal leak test (slurry design).....	
3-9	Priming test (for type G only).....	
3-10	Mill certificate on metallic materials.....	
3-11	ND tests on metals and weldings.....	

BASIC VERSIONS

F-V TYPE (BASIC TYPE WITH HOLLOW SHAFT)

Fundamental design of TEIKOKU Motor Pump. Most commonly used for a wide variety of applications.

FA-V TYPE (BASIC TYPE WITH HOLLOW SHAFT)

Fundamental design of TEIKOKU Motor Pump, but with adapter to increase motor and pump combinations.

RW/RV AND/OR FW/FV (VERTICAL IN-LINE)

RW or RV (Reverse Circulation)

- Improves Venting
- Improves Bearing Load
- Recommended for Low Viscosity and Steep Vapor Pressure Liquids
- Minimum Space Required

FW or FV (Hollow Shaft)

- Minimum Space Required

R TYPE (REVERSE CIRCULATION TYPE)

Suitable for handling volatile fluids, such as Ammonia, Freon, and other liquified gases, and for very low NPSH applications.

K-S TYPE (FULL-STEAM-JACKET TYPE)

Suitable for handling fluids with high melting points.

K TYPE (FULL-STEAM JACKET TYPE)

Similar to K-S type, but for fluids with lower melting point.

B TYPE (HIGH-TEMPERATURE-INSULATION TYPES)

Suitable for handling high temperature fluids, such as heat transfer oil.

D TYPE (SLURRY SEAL TYPE)

Suitable for handling fluids containing small amounts of fine solids.

G TYPE (SELF-PRIMING TYPE)

Used for pumping fluids from underground tank or rail/tank truck unloading.

XG TYPE (GAS-SEALED SLURRY TYPE)

Handles fluid with considerable slurry. Besides XG-type, SG-type with external flushing is also available.

F-M TYPE (MULTI-STAGE TYPE)

Higher head, higher efficiency pump. Besides F-M type, R-M (Reverse Circulation) type and B-M (High Temp-Insulation) type are also available.

X TYPE (HIGH-TEMPERATURE-INSULATION TYPES)

Suitable for handling high temperature fluids, such as heat transfer oil.

FLUIDS PUMPED BY TEIKOKU

Acetaldehyde	Cyclohexylamine	Kerosene	1,2-Propanediol
Acetic acid		Ketene	1,3-Propanediol
Acetic anhydride	Developer		2-Propanol
Acetone	Dibutyl phthalate	Lactic acid (d or l)	Propionaldehyde
Acetone cyanhydrin	Dichloroacetic acid	dl-Lactic acid	Propionic acid
Acetonitrile	m-Dichlorobenzene	Lactonitrile	Propylene
Acrolein	o-Dichlorobenzene	Lanthanum hydroxide	Propylene oxide
Acrylic acid	p-Dichlorobenzene	Latex	Pyridine
Acrylonitrile	1,1-Dichloroethylene	Lauric acid	
A-Heavy oil	cis-1,2-Dichloroethylene	Lead (II) nitrate	Racemic acid
Aldol	trans-1,2-Dichloroethylene	Ligroin	
Allyl alcohol	1,1-Dichloropropane	Liquified petroleum gas	Sea water
Allyl chloride	1,2-Dichloropropane	Liquid ammonia	Silicone oil
Aluminium hydroxide	1,3-Dichloropropane	Liquid paraffin	Silicone tetrachloride
Aluminium potassium	2,2-Dichloropropane	Lithium chloride	Sodium acetate
Aluminium potassium sulfate	1,1-Dichloropropylene	Lithium bromide	Sodium carbonate
Aluminium sulfate	1,2-Dichloropropylene		Sodium chlorate
2-Aminoethanol	2,3-Dichloropropylene	Maleic acid	Sodium chloride
Ammonium carbonate	3,3-Dichloropropylene	Maleic anhydride	Sodium cyanide
Ammonium chloride	cls-1,3-Dichloropropylene	1-Malic acid	Sodium dithionate
Ammonium hydrogensulfide	trans-1,3-Dichloropropylene	Manganese (II) chloride	Sodium formate
Ammonium sulfate	Diethanolamine	Mercury	Sodium hydrogensulfate
Ammonium tetrachlorozincate	Diethylamine	Methacrylic acid	Sodium hydrogensulfite
Ammonium thiocyanate	Diethylene glycol	Methanol	Sodium hydroxide
Aniline	Diethylene glycol	Methyl acetate	Sodium hypochlorite
Anisole	monoethyle ether	Methyl acetoacetate	Sodium metaphosphate
Anthracene oil	Di-2-ethylhexyl phthalate	Methyl acrylate	Sodium molybdate
Aqueous ammonia	Diketene	Methylamine	Sodium nitrite
	Dimethylamine	Methyl bromide	Sodium peroxide
Barium sulfide	2-Dimethylaminoethanol	Methyl chloride	Sodium silicate
Barium tetrasulfide	N,N-Dimethylformamide	Methylchloroform	Sodium sulfate
Barium trisulfide	2,3-Dimethylphenol	Methyl chloroformate	Sodium sulfide
Benzaldehyde	2,4-Dimethylphenol	Methylchlorophenoxyacetic acid	Sodium sulfite
Benzene	2,5-Dimethylphenol2,6-	Methylene chloride	Sodium thiosulfate
Benzen chloride	3,4-Dimethylphenol	Methyl ether	Solvent naphtha
Benzine	3,5-Dimethylphenol	Methylisobutyl ketone	Soy
Benzyl alcohol	2,3-Dimethylpyridine	Methyl methacrylate	Stearic acid
Benzyl chloride	Dimethyl sulfate	2-Methylpyridine	Styrene
Boron oxide	Dimethyl sulfite	3-Methylpyridine	Sulfur
1,2-Butadiene	1,3-Dioxane	4-Methylpyridine	Sulphur dichloride
1,3-Butadiene	1,4-Dioxane	Methyl sulfide	Sulphur dioxide
Butane	Dipropylene glycol	Morpholine	Sulphur trioxide
1-Butanol			Sulfuric acid
di-2-Butanol	Epichlorohydrin	Naptha	
Butyl acetate	Ethanol	Naphthalene	Tallow
Butyl acrylate	Ehtyl acetate	Nickel (II) chloride	Tetrahydrofuran
tert-Butyl alcohol	Ethyl acrylate	Nickel (II) nitrate	2,3,4,5-Tetrahydrophthalic acid
Butylaldehyde	Ethylbenzene	Nitric acid	3,4,5,6-Tetrahydrophthalic acid
Butylamine	Ethyl chloroformate	Nitrobenzene	Thinner
dl-sec-Butylamine	Ethylene chloride	Nitrogen dioxide	Thiourea
tert-Butylamine	Ethylenediamine	m-Nitrotoluene	Tin (II) chloride
	Ethylene glycol	o-Nitrotoluene	Titanium (IV) chloride
Cadmium nitrate	Ethylene oxide	p-Nitrotoluene	Toluene
Calcium chlorate	Ethyl ether	w-Nitrotoluene	m-Toluidine
Calcium chloride	Ethyl chloride	2-Nitro-m-xylene	o-Toluidine
Calcium hydroxide	Ethyl=d=lactate	4-Nitro-m-xylene	p-Toluidine
Calcium hypochlorate	Ethyl methyl ketone	5-Nitro-m-xylene	1,2,3-Trichlorobenzene
Calcium sulfite	5-Ethyl-2-methylpyridine	3-Nitro-o-xylene	1,2,4-Trichlorobenzene
Caprolactam		4-Nitro-o-xylene	1,3,5-Trichlorobenzene
Carbon bisulfide	Fatty acid	2-Nitro-o-xylene	1,1,2-Trichloroethane
Carbon dioxide	Freon R-11	1-Octanol	Trichloroethylene
Carbon tetrachloride	Freon R-12	Octyl chloride	Tri-m-cresyl phosphate
Chloral	Formaldehyde	Oleic acid	Tri-o-cresyl phosphate
L-Chlorine	Formimide	Orthoboric acid	Tri-p-cresyl phosphate
Chlorine dioxide	Formic acid	Oxalic acid	Triethylamine
Chloroacetic acid	Fuming sulfuric acid		Trethylene glycol
Chloroacetone	Furfural	Paraffin	Trimethylamine
m-Chloroaniline	Furfuryl alcohol	Paraldehyde	
o-Chloroaniline		Pentachloroethane	Urea
p-Chloroaniline	Gasoline	Phenol	
Chlorobenzene	D-Glucose	m-Phenosulfonic acid	Vinegar
Choroform	Glycerin	o-Phenosulfonic acid	Vinyl acetate
Chlromium (VI) oxide	Glycine	p-Phenosulfonic acid	Vinyl chloride
Chlorosulfuric acid		Phosgene	Vinylidene chloride
Citric acid	Heavy Water	Phosphorus trichloride	
Coconut oil	Hydrazine	Phosphoryl chloride	Water
Copper (II) hydroxide	Hydrogen chloride	Phthalic acid	m-Xylene
Copper (II) sulfate	Hydrogen cyanide	Phthalic anhydride	o-Xylene
m-Cresol	Hydrogen fluoride	Polythylene glycol	p-Xylene
o-Cresol	Hydrogen peroxide	Potassium carbonate	p-Xylidine
p-Cresol	Hydrogen sulfide	Potassium chlorate	sym, m-Xylidine
Croasote oil	Hudrofleuric acid	Potassium cyanide	unsym, m-Xylidine
Crotonaldehyde		Potassium hydroxide	unsym, o-Xylidine
Cyanoacetic acid	Iron (II) oxide	Potassium permanganate	vic, m-Xylidine
Cyclohexane	Iron (II) sulfate	Potassium phosphate	vic, 0-Xylidine
Cyclohexane	Isobutyl alcohol	Potassium sulfate	
Cyclohexanone	Isobutyl aldehyde	Propane	Zinc oxide

OPTIONS

NEW COMPACT DIGITAL PUMP LOAD CONTROL

Detect Loss of Load

- Dry running
- No prime
- Cavitation

Detect Overload

- Jammed impeller
- Bad bearings

2 Adjustable Set Points

LOW TRIP - When load is below the Low Trip, the built-in relay will trip.

- Dry running
- Loss of prime
- Plugged or closed inlet

HIGH TRIP - When the load is above the High Trip, the built-in relay will trip.

- Jammed impeller
- Bearing failure

Filter Out Nuisance Trips

- Adjustable Digital On-Delay Timers:
Trip won't activate until the selected delay time is exceeded.
- Adjustable Digital Start-up Timer: no false trips while motor is starting

THERMOWELL

Certain applications demand extra attention to thermal conditions. Teikoku can provide thermowells on their pumps to detect extreme temperature operations. The heavy-duty thermowells are designed to accommodate a wide variety of temperature indicating devices.
